## **ABSTRACT**

A cathode composition for a lithium-ion battery having the formula  $Li[M^{I}_{(1-x)}Mn_{x}]O_{2}$  where 0 < x < 1 and  $M^{I}$  represents one or more metal elements, with the proviso that  $M^{I}$  is a metal element other than chromium. The composition is in the form of a single phase having an O3 crystal structure that does not undergo a phase transformation to a spinel crystal structure when incorporated in a lithium-ion battery and cycled for 100 full charge-discharge cycles at 30°C and a final capacity of 130 mAh/g using a discharge current of 30 mA/g.
